

GoDaddy.com Renewal

Current plan and optional proposed service changes

Renewals scheduled for 7/19/2026

Web Hosting Deluxe - Linux 3 year (cPanel Hosting) – **\$826.92**

Website backup 10GB 3 years – **\$143.64**

Total renewal at this time: **\$970.56 + tax**

Current Issues

1. WCP has an SSL certificate that protects users when browsing by encrypting their browsing session
2. WCP does not have backend protection from malicious attempts against our site
3. GoDaddy has informed us that our CPU usage is constantly pegged at 100% due to automated bots hitting our WCP site and that we're at risk
4. A solution to mitigate this is to add GoDaddy's firewall protection to our plan
 - a. High priority service guarantees the site will be back up in 8 hours
 - b. Low priority service guarantees the site will be back up in 72 hours
 - i. If we sign a one year firewall plan, the first year will be \$167.88
 - ii. Each year after that will be **\$239.88**
5. Adding the firewall protection will bring this year's renewal to **\$1,138.44 + tax**

New Proposal Option

1. GoDaddy's Airo (AI generated web site) includes all services:
 - a. SSL
 - b. Firewall/security
 - c. Hosting site
 - d. Backups
 - e. AI web design generation

- f. Mobile friendly/auto adjusts
 - g. Built in marketing tools (analytics so we could see who in our community is accessing the site)
 - h. No ongoing maintenance needing to be performed by us (we currently have to update our PHP and Wordpress versions)
- 2. 3 year term is **\$1095.00**
- 3. We would not receive a credit for the remaining 2 years on our SSL certificate

Changes that would impact us

- 1. We would no longer be using Wordpress to update our site
- 2. Changes to the site would be through AI prompts
 - a. From the description, it's a drag and drop process to change the pages and content
 - b. There are training videos (although I haven't watched them yet) on how to update the site
- 3. The Airo AI site builder can convert our current site to the new platform; minimal work for WCP HOA to perform

Next Steps

- 1. Jonathon Thompson to contact GoDaddy sales rep on Tuesday, 7/14 to finalize renewal plans
- 2. The credit card on file from IWM is no longer valid and a billing method needs to be provided to GoDaddy
 - a. Jonathon Thompson used personal credit card to pay for the domain renewal two months ago
- 3. We need to make a decision to either renew the current services, add the firewall protection, or switch to Airo.
